

Summary statistics

##A basic two-way table of two categorical vars (age vs sex)

```
tabulate Age Sex, col nof
```

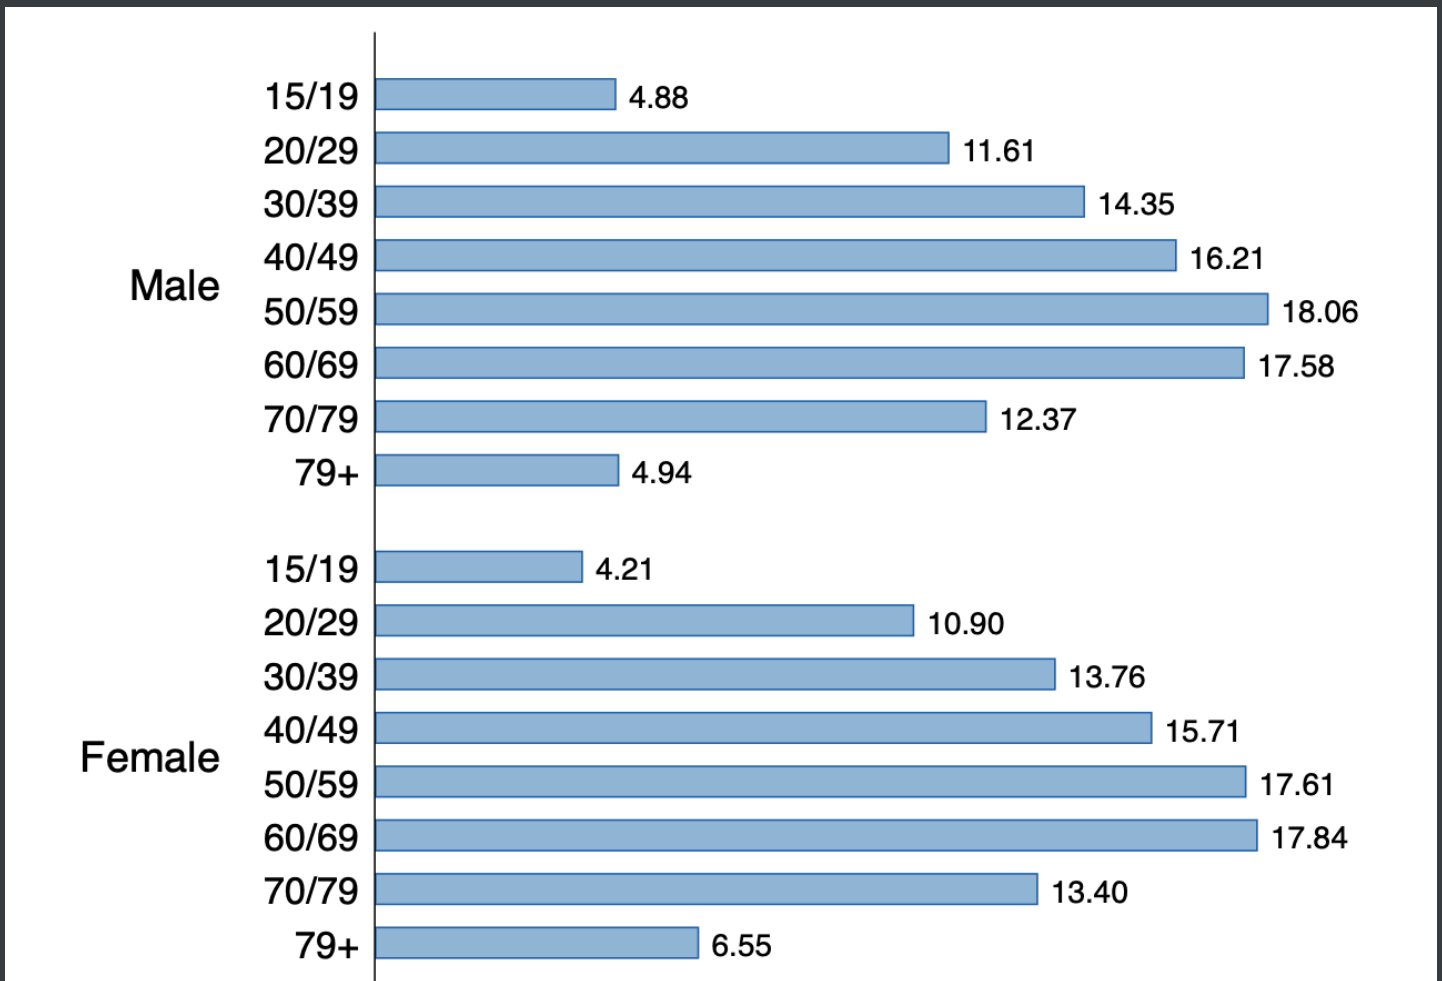

```

      Sex
Age Male  Female  Total
15/19 4.88   4.21   4.52
20/29 11.61  10.90  11.23
30/39 14.35  13.76  14.03
40/49 16.21  15.71  15.94
50/59 18.06  17.61  17.82
60/69 17.58  17.84  17.72
70/79 12.37  13.40  12.92
79+  4.94   6.55   5.81

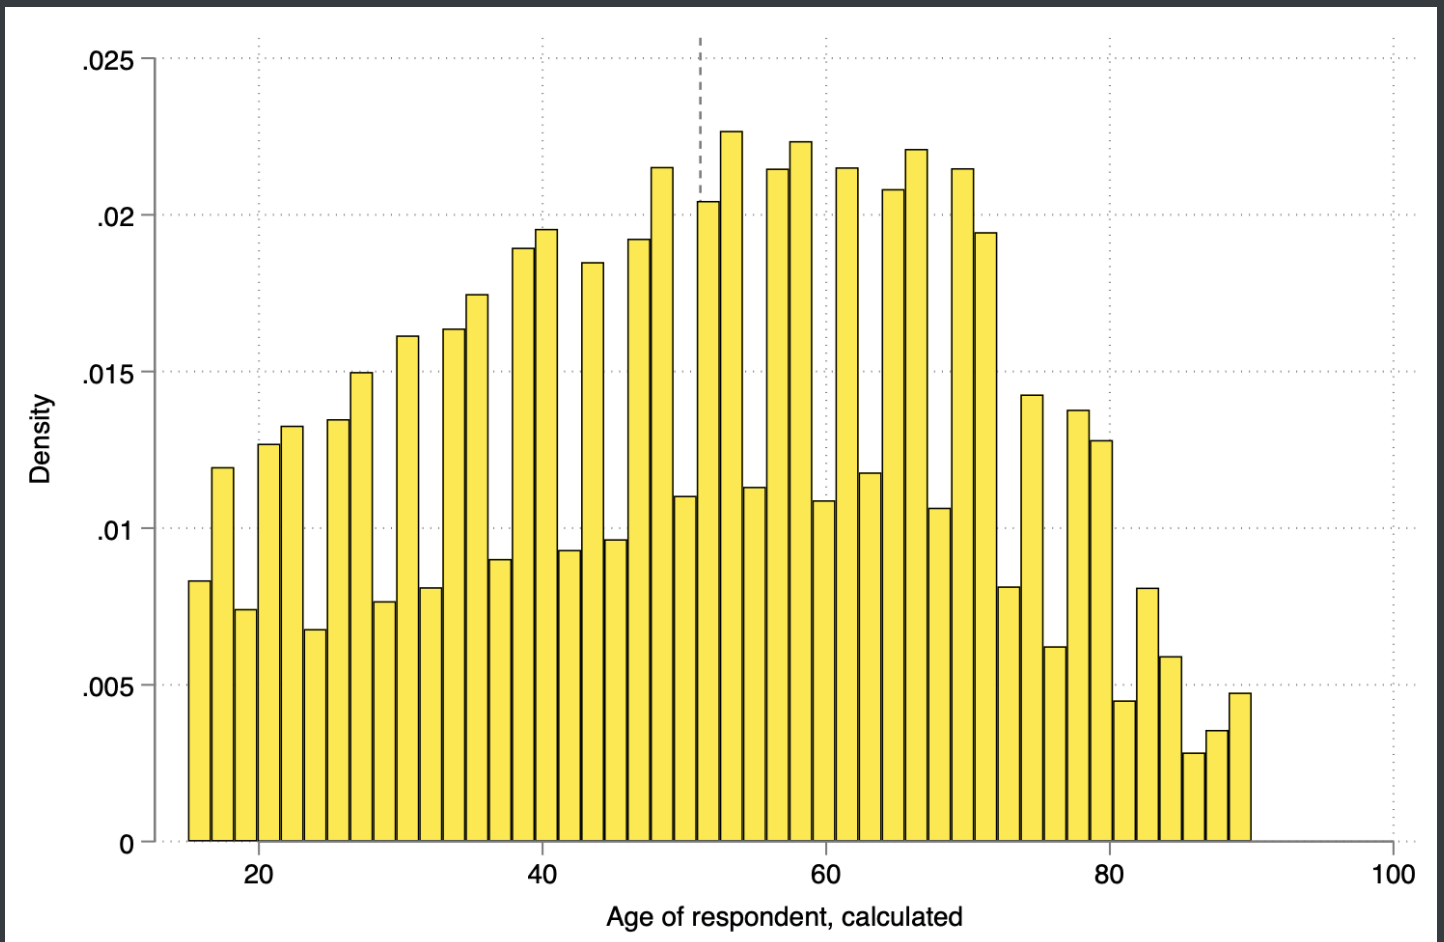

Total 100.00  100.00  100.00
```

Note: col refers to column percentage, and nof to no frequency. replacing col with 'row' will report row frequency, but both arguments cannot be used at the same time.

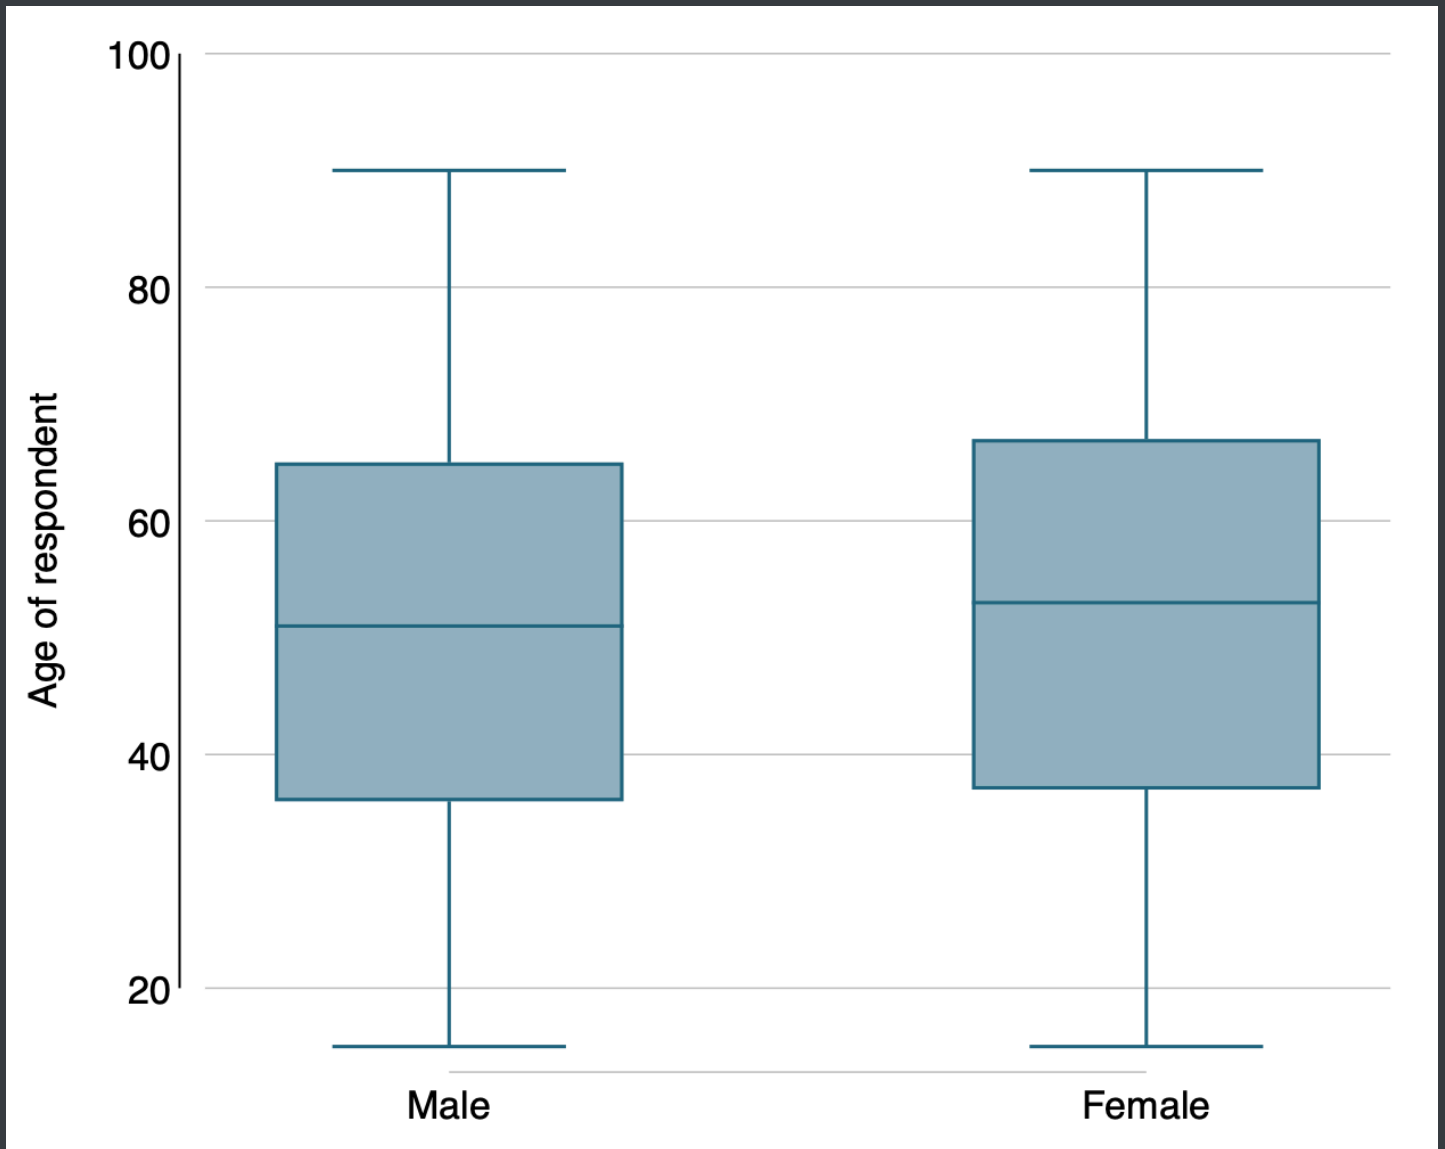

Showing the same data as a bar chart:
